Press Release:

Telcordia® IP Assure Receives Two Awards From Info Security Product Guide

PISCATAWAY, NJ - April 20, 2009 - Telcordia announced today that Info Security Products Guide, the industry's leading publication on security-related products and technologies, has named [Telcordia® IP Assure](#) the winner of two of its annual awards, including the 2009 Global Product Excellence in IP Network Device Configuration Assessment Customer Trust Award and the 2009 Tomorrow's Technology Today Award for Network Configuration Assessment. These honors underscore IP Assure position as a best-of-breed product that provides the highest security integrity check for an entire IP network.

"In an interconnected world threats have no boundaries and security has to remain a prime requirement," says Rake Narang, editor-in-chief of Info Security Products Guide. "We are pleased to honor Telcordia IP Assure as winner for 2009."

Telcordia IP Assure is a flexible and scalable web-based software solution that assesses configuration files of IP-based devices (e.g. routers, switches, firewalls) against large built-in rule-sets capturing industry best practices to determine if required security, availability and regulatory policies are correctly implemented. It transforms the costly labor-intensive job of network error detection and remediation into a simple automated process.

"As communications service providers, government agencies and large enterprises, such as financial institutions and health care providers, continue to rely on IP networks for bandwidth, speed and cost-savings to carry mission-critical data, their IP networks are increasingly become more complex and dynamic," said Adam Drobot, CTO & President, Advanced Technology Solutions, Telcordia. "In anticipation of the market demand, we developed Telcordia IP Assure to provide IT network and security administrators with a flexible and scalable software solution that detects possible vulnerabilities and delivers automated and non-intrusive assessment and awareness of the IP network."

The solution has already proved successful for a large, high profile, United States government agency, please view [case study](#), and continues to serve the growing needs of network operators for enterprises and government agencies worldwide.
